

Instructions

1. Open “Task1_client” & “Task1_server” files
 - a. These are the completed files to upload/download files from server to client and vice versa
2. Enter your IP address
 - a. Client:

```
# Include the server Address
serverAddr = ('192.168.1.12', port)
```
 - b. Server:

```
# Get local machine address
ip = "192.168.1.12"
```
3. Run the server file first
4. Then run the client file to establish a connection with the server
 - a. On their respective IDLE shells their keys will display and automatically be sent to one another and stored
5. A list of commands will pop up on the Client side:

```
Enter one command: PUT_csv, PUT_pdf, GET_csv, GET_pdf, EXIT
->
```
6. PUT_csv
 - a. Uploads csv file from Client to Server
7. PUT_pdf
 - a. Uploads pdf file from Client to Server
8. GET_csv
 - a. Downloads csv file from Server to Client
9. GET_pdf
 - a. Downloads pdf file from Server to Client
10. EXIT
 - a. Closes the connection between the Client and Server
